COMPLETE BATTERY MANAGEMENT

*Innovation and Reliability for
a Changing Industry*

MTC's commitment to the customer has provided the competitive advantage that has helped fuel the company's growth. Design, engineering, manufacturing, sales and service are all strategically coordinated to serve your battery handling needs. With customers throughout the world, MTC understands the global needs of today's manufacturers and distributors. We are prepared to meet the challenges of the future

Who Chooses the WBP?

Typical WBP customers purchase the Walk-A-Puller when they need to service a facility with a wide variety of sit down, narrow aisle and/or pallet trucks. The ability of the WBP to change batteries in different style vehicles in different locations of a factory, warehouse or distribution center makes the unit one of the most versatile and affordable battery pullers on the market today. If a customer's lift trucks require conversion to allow for side extraction, slide strips or roller systems are available from MTC. Consult your local dealer or call us with your specific requirements.

"Wide Outriggers, No Problem!"

The adjustable extraction arm of the Walk-A-Puller (WBP) and the heavy-duty Attach-A-Puller (ABP) allows both units to easily access batteries over wide outriggers. The retracted reach of the extraction arm is 6 3/4", and it is adjustable in 1" increments up to a maximum reach of 11 3/4". The versatility offered by the adjustable extraction arm is another example of MTC's commitment to meeting your various battery handling needs.

Magnetic Option:

A powerful battery-changing solution for those who prefer to use magnetic extraction.

Portable Changers

Specifications subject to change without notice.

Choose the only full-featured portable battery changer in the industry.

The Walk-A-Puller (WBP) is designed to handle a wide variety of lift truck and motive power applications from the low profile AGV batteries to the high capacity turret trucks and counter balance trucks.

The WBP combines its own power and drive unit, carriage assembly and attachment system to give you a portable, but complete, heavy-duty battery handler. The unit's ease of operation allows qualified lift truck operators to safely and easily change their own lift truck batteries. The Walk-A-Puller is recommended for those applications requiring 20 to 40 battery changes per day where battery compartment height variation is greater than 6" or over 12" above the floor. Two WBP models are available to meet virtually any battery handling need. For more information, contact your authorized MTC sales representative and ask for our current WBP specification sheet.

FEATURES

BENEFITS

Portable, Self-Contained Battery Changer Unit

Enables battery changing at various locations

Lift Height Adjusts from 3" to 27"

Capable of reaching virtually all battery storage compartments

Adjustable Extraction Arm

Allows for battery attachment over wide outriggers

Standard 4,000 lb. Capacity

Ensures stability under maximum load conditions

Two Speed Electric Drive

Allows operator to choose the safest speed at which to retrieve and transport each lift truck battery

Ease of Operation

Allows lift truck operator to safely change battery

EZ Puller

The inexpensive alternative to powered transfer carts.

Fork pockets are available for standard fork sizes 27" x 42" or 48" in length.

For powered push/pull please consult factory.

EZ Puller

→ The EZ Puller Model EZP-24 portable battery transfer cart is the inexpensive alternative to powered transfer carts. The EZ puller is ideal for facilities that require only a few battery changes each day. The Model EZP-24 can be mounted to a single pallet truck or it can be ordered with convenient fork pockets for use on multiple trucks. The unit features a 4-to-1 hand crank that makes it easy to remove or replace lift truck batteries. The safety latch located in the front of the battery carriage is used to lock the battery in place while it's being transported. Durable powder coat paint ensures long life and easy cleanup.

FEATURES

Manual battery extraction

Heavy duty rollers

Durable powder coat finish

BENEFITS

Provides quick and reliable battery changing

Assures long life and level battery transfers

Easy to clean and acid resistant
