

CellSPY Install Guide

V1.2 April 18, 2023

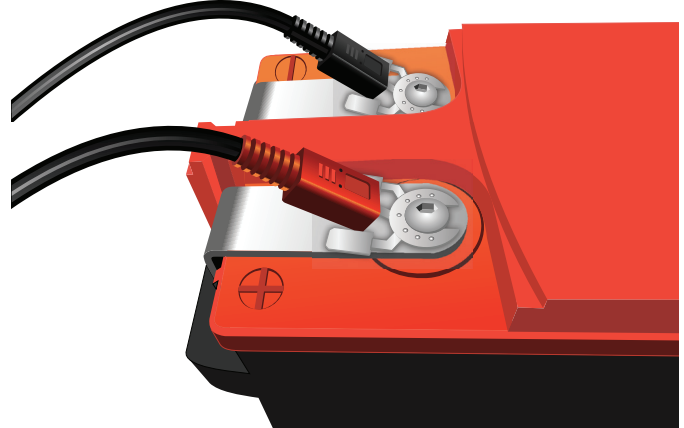

WWW.EMSYS-DESIGN.COM

Step 1

Plug the **black** connector onto the tab of the negative post

Step 2

Plug the **red** connector onto the tab of the positive post

Step 3

You may fasten the CellSPY to the battery with velcro or simply lay it against the battery. A blue light will signify it's powered & ready to go.

NOTE:

If a CellSPY sensor is flashing yellow, the battery is in a voltage alarm. This is to be expected if the battery is not being charged. If the CellSPY is flashing red, the battery is in a temperature alarm. Reference the EMSYS Sensor Color Code User Guide for additional visual alarm info. Also log into the BMS Application for specific alarm details.
